

"!Breaking news fortnite season 7 is coming to an end!"

So before we go into next season lets get a recap on this season

so to start off we have the collab with rick and morty having rick in the battlepass and morty in the item shop sold as a bundle. The bundle included the morty skin, the meeseeks backbling, and the space snake pickaxe. The skin itself got alot of positive feedback and also the pickaxe; The pickaxe is very unique it has the space snake from season 4 in the show Rick and Morty. This collaboration also led to the realease of the shows 5th season! On the other hand the battle pass had a wopping **1,000,000 sales accrosed the world!** The morty bundle had **Over 1,000,000 sales!** which is insane. This new season also brought us the new pulse rifle and the grabitron. The pulse rifle is basically a robotic gun that shoots lazars at a slower speed than a normal assault rifle. The grabitron on the other hand is more of a fun weapon to use it can be used to pick up rocks, cars, and guns and fling them at people or just to launch them to teammates

" Next we have the Superman skin"

truly the superman skin is amazing it has a normal klark kent style and a superman style. For anybody that does not know klark kent is superman just not in his supersuit, in a normal suit. It also comes with a cryptonite pickaxe. The cryptonite pickaxe looks great it is a giant pickaxe made from supermans only weakness cryptonite. There is also a dark style of superman where he appears to have a black and whit suit instead of red and blue but it is very difficult to accuire. You can unlock the dark style by completing 80 epic challenges, but first you must complete 5 challenges from zeropoint batman, klark kent, and beastboy to unlock the superman skin. Then comes the hard part unlocking the rest of the items in the set, which is not easy...

**" As always thank you everyone for listening to the
Fortnite News brought to you from your's truly
Aiden Everett"**
